

# PLANETARY ROLLER SCREWS

Rev.A, October 2020

CUSTOMIZED DESIGN AND SUPERIOR ACCURACY FOR PRECISION POSITIONING APPLICATIONS WITH HIGH LOADS AND ACCELERATIONS

Whenever the highest levels of motion control performance and design flexibility are required, you'll find Moog expertise at work. Through our world-class technological solutions, we help you overcome your toughest engineering obstacles.

## MOOG PLANETARY ROLLER SCREWS

### Moog: Always the best technology for you

Thanks to our extensive experience applying hydraulic and electric motion control, Moog is uniquely positioned to provide the most appropriate solutions for each application applying a wide variety of technologies. Our "technology neutral" perspective means that we always recommend the best technical solution for the customer as we have a deep understanding of advantages and challenges of all motion technologies.

#### Moog: Linear actuation suite of solutions

For instance, compared to hydraulic and pneumatic linear motion system, an electromechanical system incorporating a linear motion feeding mechanism is superior in many aspect, and can dramatically reduce complexity of the control system of valves, pumps, filters, and sensors.

Of all screws used for industrial motion control, roller screws are indisputably the head of the class in terms of performance durability and a host of other characteristics, offering several advantages over all other designs (ball or acme screws).

#### Moog: Roller screw makes the difference

There are many different parameters to consider when deciding between technologies. Lifetime is often one of the most important, and sometimes most overlooked, factors, especially in the face of immediate costs. While a ball screw solution might present lower upfront costs, roller screws have a higher dynamic load rating than ball screws, with smaller sizes, and they provide a much longer working life to the machine, thus proving to be a better long-term investment.

In addition, the size and configuration of a roller screw, conventional or inverted, can be fine-tuned so the actuator will meet all the performance requirements of the application in a smaller envelope. An actuator with roller screws will also consistently exceed the dynamic load capability and lifetime of a much larger ball screw one.

Roller screw actuators offer several advantages over ball screw actuators:

- An appropriately designed roller screw will always be inherently more reliable than its ball screw counterpart
- Parity of performance with a ball screw can be achieved by a considerably smaller roller screw, allowing significant downsizing

- Roller screw actuators are the perfect choice for extremely high duty cycle applications
- They are ideal for applications that require long uninterrupted operation for high yield machinery.
- They allow noise level reduction in noise sensitive environments

#### Moog: Comparing technologies

Conventional ball screw assemblies can provide relatively accurate linear motion for industrial machines at somewhat lower costs. However, this apparent advantage is offset by limitations in terms of precision and dynamics as well as their general bulkiness. Thus modern designers often find difficult to integrate them into the more and more compact configurations required by current machinery.

Roller screw technology present itself as an overall better alternative, with superior loading capabilities and more accurate positioning, greater power density and consistent reliability, over an exponentially longer lifetime.

The technical concepts that stand behind a roller screw ensure distinct mechanical advantages, over a ball screw:

- Rollers have larger number of contact points allowing for:
  - Higher static and dynamic Load capacity
  - Longer service life
  - Increased axial stiffness
- Their planetary driven mechanism will deliver:
  - Higher speeds and accelerations
  - Reduced level of noise and vibrations (arising mainly from timing gears)
  - Superior shock load resistance (absence of collisions between rolling elements)
  - Reliable response on movement reversals
  - Improved heat resistance (lower rolling friction)
- The absence of recirculating elements will significantly reduce risks of mechanical failures (pitting, false brinelling)
- Assemblies with less components will lower maintenance requirements, allowing for simpler and less frequent maintenance, and inertia, allowing for the use of smaller motors

## Moog: Roller screw fields of success

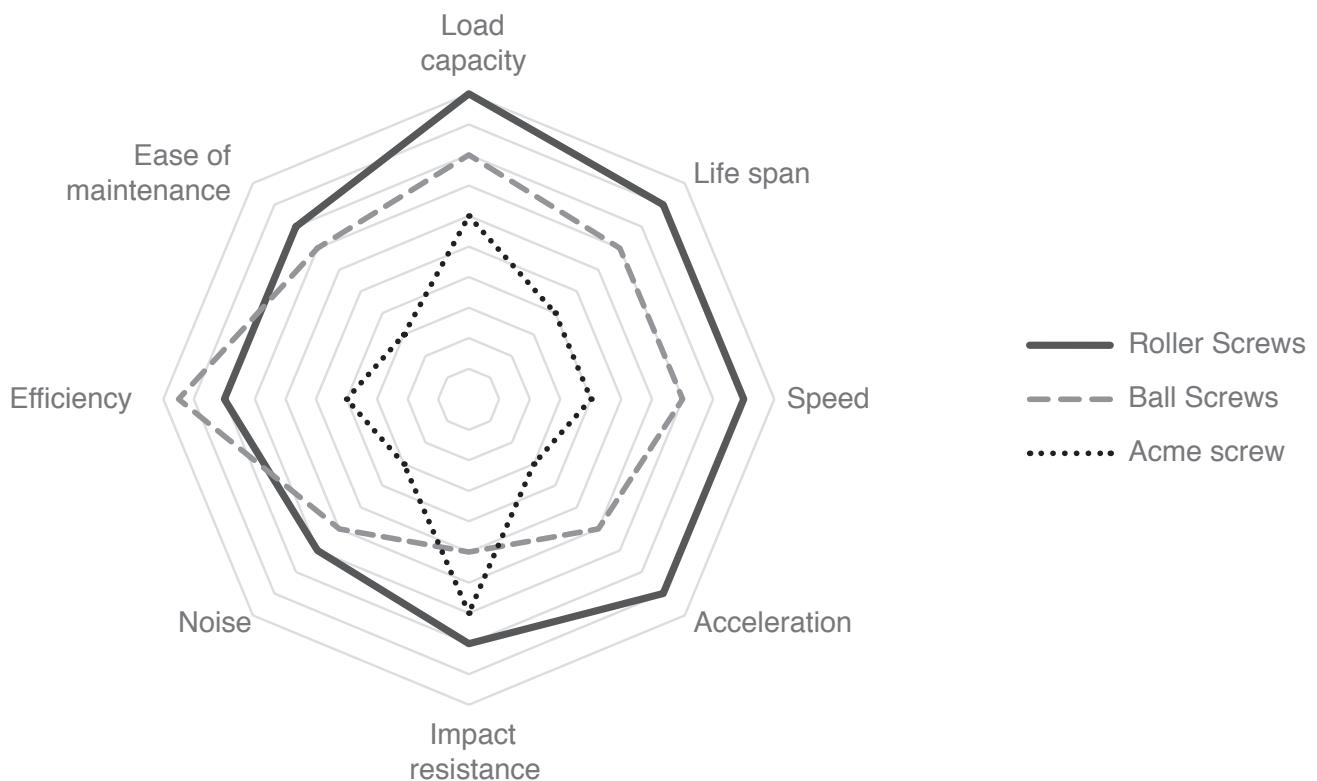

Roller screw based electromechanical cylinders are increasingly used as drop-in replacements for hydraulic rams in applications that require high actuation forces, providing additional value over the lifetime of a machine that more than offsets the higher initial outlay. Operations that require precise and replicable linear motion, such

as welding or riveting, are the most common examples of applications for which roller screws are best suited, thanks to their positioning accuracy and motion repeatability. They are equally indicated for a wide variety of industrial applications, from plastic molding to micro-electronics.

## Screws technologies

	<b>Roller Screws</b>	<b>Ball Screws</b>	<b>Acme screw</b>
<b>Load capacity</b>	Very large	Large	Large
<b>Life span</b>	Very long	Long	Very short
<b>Speed</b>	Very fast	Average	Slow
<b>Acceleration</b>	Very large	Average	Small
<b>Rigidity</b>	Very high	Average	Very high
<b>Impact resistance</b>	Very high	Average	Very high
<b>Heat resistance</b>	Very resistant	Average	Resistant
<b>Space required</b>	Very small	Average	Average
<b>Friction</b>	Small	Very Small	Large
<b>Vibration/noise</b>	Very small	Small	Slightly large
<b>Efficiency</b>	75 to 90%	85 to 95%	Around 40%
<b>Ease of maintenance</b>	Very easy	Average	Very low
<b>Environmental load</b>	Very small	Very small	Small
<b>Customizability</b>	Very high	High	Average

The table above shows a comparison of acme screw, ball screw and planetary roller screw actuators as systems deriving from Moog's own actuation design experience as well as data provided by other manufacturers.

## MOOG PLANETARY ROLLER SCREWS

### Customization

Moog is the supplier of choice for customers using screws to solve applications that mass produced screws cannot. The suite of screws ensures a reliable tailor-made solution, thanks to our extensive motion control know-how.

Our aim is to deliver a complete, high performance solution, co-designed with the customer to fulfill their requirements.

With dedicated screws designs, existing machines are suitable for upgrades without redesigning or retooling. The saving in terms of refurbishment costs are enhanced by reduced downtimes, as we are able to provide identical replacement spare parts with fast lead times even for low volume orders.

Some of the available options for Moog screws include, but are not limited to:

- Unique customizations:
  - Combination of diameter and lead not included in this catalogue
  - Special materials (such as stainless steel)
  - Heat treatments
  - Fine and Ultra-fine surface finishing (to reduce friction and increase life)
  - Dedicated solutions for harsh environments
- Special shaft features:
  - Splines
  - Deep-hole or through-hole drilling
  - Chrome plating of the interfaces
- Special nut features
  - Nut with trunnion mounting points
  - Custom shaped flanges
  - Modified points of lubrication to optimize the application

### Testing capabilities

Providing the best solution requires not only the optimal design, but also to check the in-field performances of the screws. For this purpose, Moog Bergamo has at its disposal outstanding testing capabilities, developed thanks to the experience of our highly specialized technicians. Moog's unique test benches are currently dedicated to analyze:

- Screws Preload values
- Burn-in phase
- Vibration Spectrum
- Critical Frequencies
- Backlash

## MOOG ULTRAPOWER PLANETARY ROLLER SCREWS

### Increased performances for most demanding applications

The "Ultrapower Planetary Roller Screws" Suite is Moog answer to all the applications with extreme performance requirements, which standard roller screws cannot meet. The Ultrapower series is able to compete with hydraulic

actuators to deliver Static Capacity forces of up to 3000kN, while additionally ensuring the higher precision that only electric control can deliver.

Moog specialists have optimized this technology in order to achieve maximum performance compared to other linear actuation solutions, providing also an unrivalled service life and power density.

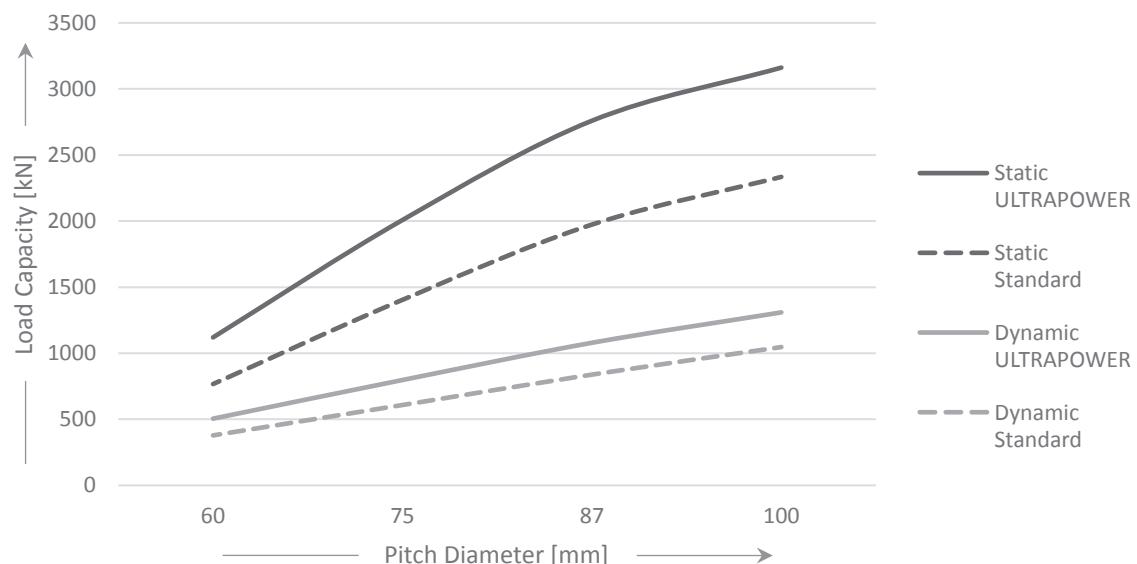

The Ultrapower Screws combine all the unique features of Planetary Roller Screws (High Precision, Speed and Acceleration rates, reduced axial backlash), with outstanding Load Capacities (up to 50% more than the standard products) in a compact envelope, making them a perfect solution even for designs with extremely small footprint.

The main industrial fields that can take advantage of the Ultrapower Screws are:

- injection molding and die casting
- steel industry (casting and rolling)
- presses

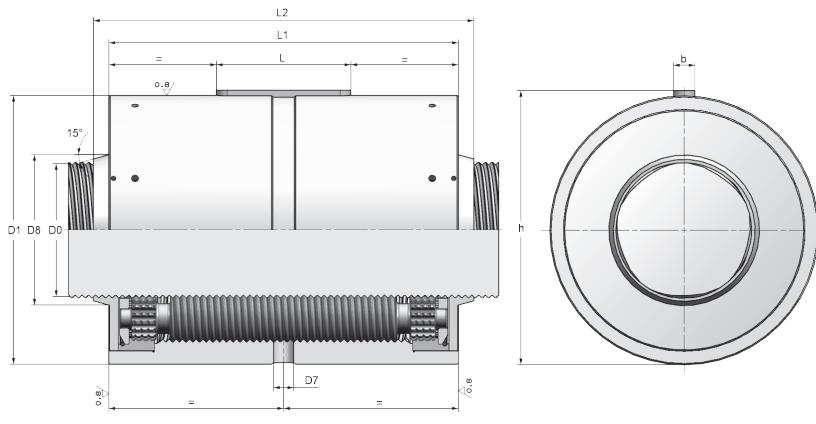

and, more generally, all applications where a suitable alternative to hydraulics is needed.

The chart below shows a comparison between the standard roller screws and the ultrapower load capacities.

## SINGLE CYLINDRICAL NUT | Dimensions and Load Capacities

Screws marked with symbol • are not standard products

**LEGEND of SYMBOLS**

$D_0$ [mm]	Nominal Diameter	$J_s$ [ $\text{kg} \cdot \text{mm}^2/\text{m}$ ]	Linear Momentum of Inertia of Shaft
$P_{h_0}$ [mm]	Lead	$J_{N-N}$ [ $\text{kg} \cdot \text{mm}^2$ ]	Momentum of Inertia of Nut with rotating Nut
$C_a$ [kN]	Dynamic Load Capacity	$J_{N-S}$ [ $\text{kg} \cdot \text{mm}^2$ ]	Momentum of Inertia of Rollers with rotating Shaft
$C_{oa}$ [kN]	Static Load Capacity	$f_s$ [ $10^6 \text{ N}$ ]	Axial Stiffness Factor of Shaft
$m_s$ [kg]	Linear Mass of Shaft	$f_N$ [ $\text{N}^{2/3}/\mu\text{m}$ ]	Axial Stiffness Factor of Nut
$m_N$ [kg]	Nut overall Mass (including rollers)		

For approximate Axial Stiffness of Nut use the formula  $R_N = f_N \cdot F_{ax}^{1/3}$ , where  $F_{ax}$  is the external axial load applied

For approximate Axial Stiffness of Shaft use the formula  $R_S = f_s / L_S$ , where  $L_S$  is the length of the threaded shaft

## SINGLE FLANGED NUT | Dimensions and Load Capacities

Table 00D

## NOTES

1) Standard number of rollers

2) Maximum number of rollers

3) Custom dimension available upon request

4) With  $D_0 < 21$  mm wipers within nut length

Screws marked with symbol • are not standard products

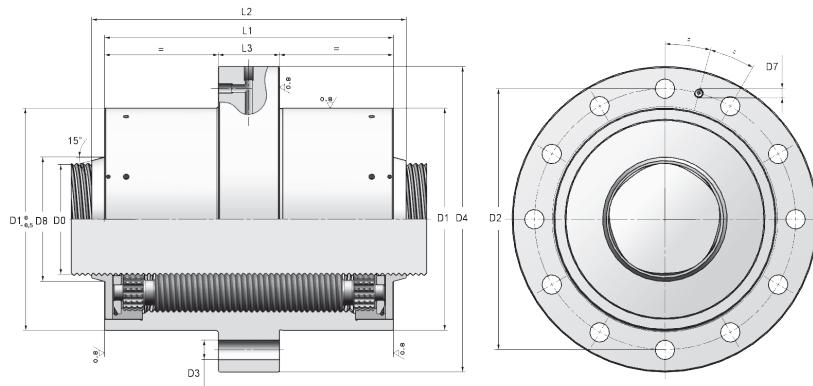

**Table 00D****LEGEND of SYMBOLS**

$D_0$	[mm]	Nominal Diameter	$J_s$	[kg·mm <sup>2</sup> /m]	Linear Momentum of Inertia of Shaft
$Ph_0$	[mm]	Lead	$J_{N-N}$	[kg·mm <sup>2</sup> ]	Momentum of Inertia of Nut with rotating Nut
$C_a$	[kN]	Dynamic Load Capacity	$J_{N-S}$	[kg·mm <sup>2</sup> ]	Momentum of Inertia of Rollers with rotating Shaft
$C_{oa}$	[kN]	Static Load Capacity	$f_s$	[10 <sup>6</sup> N]	Axial Stiffness Factor of Shaft
$m_s$	[kg]	Linear Mass of Shaft	$f_N$	[N <sup>2/3</sup> /μm]	Axial Stiffness Factor of Nut
$m_N$	[kg]	Nut overall Mass (including rollers)			

For approximate Axial Stiffness of Nut use the formula  $R_N = f_N \cdot F_{ax}^{1/3}$ , where  $F_{ax}$  is the external axial load applied

For approximate Axial Stiffness of Shaft use the formula  $R_S = f_s / L_s$ , where  $L_s$  is the length of the threaded shaft

$m_s$	$m_N$	$J_s$	$J_{N-N}$	$J_{N-S}$	$f_s$	$f_N$	Designation
kg/m	kg	kg·mm <sup>2</sup> /m	kg·mm <sup>2</sup>	kg·mm <sup>2</sup>	10 <sup>6</sup> N	N <sup>2/3</sup> /μm

Screws marked with symbol • are not standard products

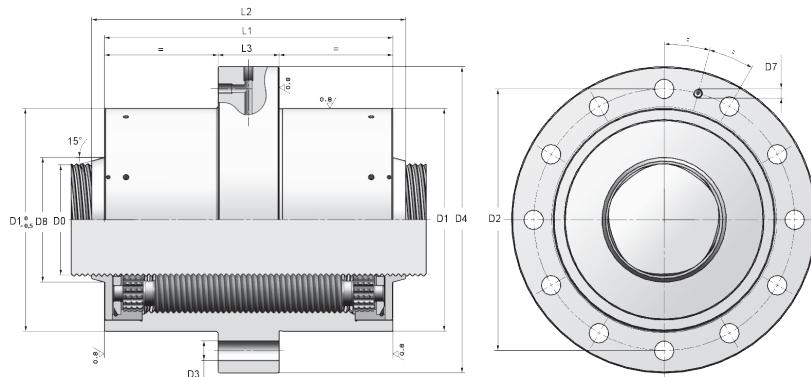

**LEGEND of SYMBOLS**

$D_0$ [mm]	Nominal Diameter	$J_s$ [ $\text{kg}\cdot\text{mm}^2/\text{m}$ ]	Linear Momentum of Inertia of Shaft
$P_{h_0}$ [mm]	Lead	$J_{N-N}$ [ $\text{kg}\cdot\text{mm}^2$ ]	Momentum of Inertia of Nut with rotating Nut
$C_a$ [kN]	Dynamic Load Capacity	$J_{N-S}$ [ $\text{kg}\cdot\text{mm}^2$ ]	Momentum of Inertia of Rollers with rotating Shaft
$C_{oa}$ [kN]	Static Load Capacity	$f_s$ [ $10^6 \text{ N}$ ]	Axial Stiffness Factor of Shaft
$m_s$ [kg]	Linear Mass of Shaft	$f_N$ [ $\text{N}^{2/3}/\mu\text{m}$ ]	Axial Stiffness Factor of Nut
$m_N$ [kg]	Nut overall Mass (including rollers)		

For approximate Axial Stiffness of Nut use the formula  $R_N = f_N \cdot F_{ax}^{1/3}$ , where  $F_{ax}$  is the external axial load applied

For approximate Axial Stiffness of Shaft use the formula  $R_S = f_s / L_s$ , where  $L_s$  is the length of the threaded shaft

$m_s$	$m_N$	$J_s$	$J_{N-N}$	$J_{N-S}$	$f_s$	$f_N$	Designation
kg/m	kg	$\text{kg}\cdot\text{mm}^2/\text{m}$	$\text{kg}\cdot\text{mm}^2$	$\text{kg}\cdot\text{mm}^2$	$10^6 \text{ N}$	$\text{N}^{2/3}/\mu\text{m}$

Screws marked with symbol • are not standard products

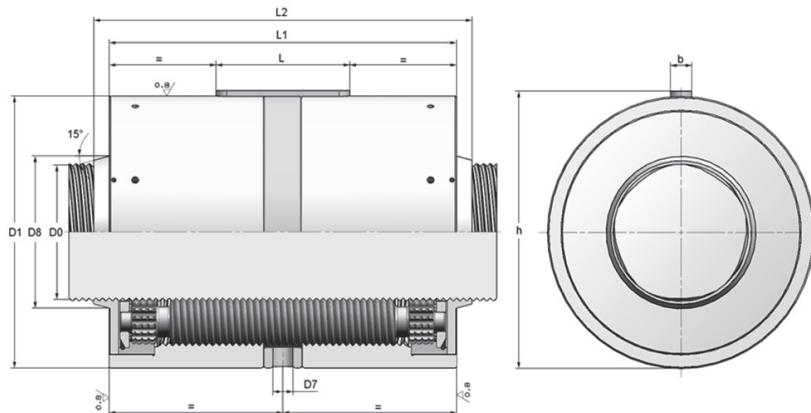

**Table OCC****LEGEND of SYMBOLS**

$D_0$	[mm]	Nominal Diameter	$J_s$	[kg·mm <sup>2</sup> /m]	Linear Momentum of Inertia of Shaft
$P_{h_0}$	[mm]	Lead	$J_{N-N}$	[kg·mm <sup>2</sup> ]	Momentum of Inertia of Nut with rotating Nut
$C_a$	[kN]	Dynamic Load Capacity	$J_{N-S}$	[kg·mm <sup>2</sup> ]	Momentum of Inertia of Rollers with rotating Shaft
$C_{oa}$	[kN]	Static Load Capacity	$f_s$	[10 <sup>6</sup> N]	Axial Stiffness Factor of Shaft
$m_s$	[kg]	Linear Mass of Shaft	$f_N$	[N <sup>2/3</sup> /μm]	Axial Stiffness Factor of Nut
$m_N$	[kg]	Nut overall Mass (including rollers)			

For approximate Axial Stiffness of Nut use the formula  $R_N = f_N \cdot F_{ax}^{1/3}$ , where  $F_{ax}$  is the external axial load applied

For approximate Axial Stiffness of Shaft use the formula  $R_S = f_s / L_s$ , where  $L_s$  is the length of the threaded shaft

## SPLIT FLANGED NUT | Dimensions and Load Capacities

Table ODD

## NOTES

- 1) Standard number of rollers
- 2) Maximum number of rollers
- 3) Custom dimension available upon request
- 4) With  $D_0 < 21$  mm wipers within nut length

Screws marked with symbol • are not standard products

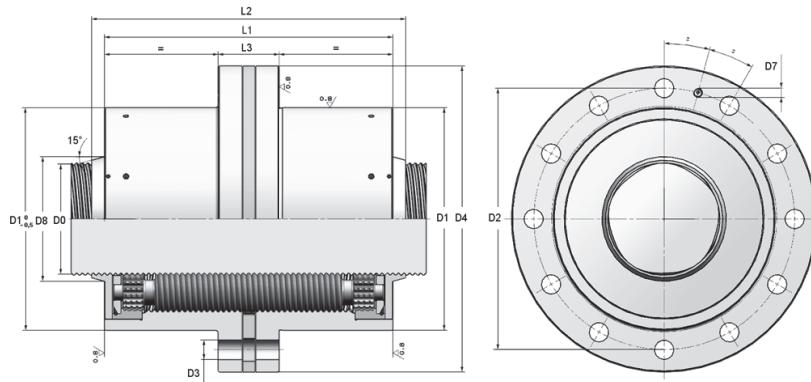

**Table ODD****LEGEND of SYMBOLS**

$D_0$	[mm]	Nominal Diameter	$J_s$	[kg·mm <sup>2</sup> /m]	Linear Momentum of Inertia of Shaft
$P_{h_0}$	[mm]	Lead	$J_{N-N}$	[kg·mm <sup>2</sup> ]	Momentum of Inertia of Nut with rotating Nut
$C_a$	[kN]	Dynamic Load Capacity	$J_{N-S}$	[kg·mm <sup>2</sup> ]	Momentum of Inertia of Rollers with rotating Shaft
$C_{oa}$	[kN]	Static Load Capacity	$f_s$	[10 <sup>6</sup> N]	Axial Stiffness Factor of Shaft
$m_s$	[kg]	Linear Mass of Shaft	$f_N$	[N <sup>2/3</sup> /μm]	Axial Stiffness Factor of Nut
$m_N$	[kg]	Nut overall Mass (including rollers)			

For approximate Axial Stiffness of Nut use the formula  $R_N = f_N \cdot F_{ax}^{1/3}$ , where  $F_{ax}$  is the external axial load applied

For approximate Axial Stiffness of Shaft use the formula  $R_S = f_s / L_S$ , where  $L_S$  is the length of the threaded shaft

## ULTRAPOWER | SINGLE FLANGED NUT | Dimensions and Load Capacities

Table UPD

## LEGEND of SYMBOLS

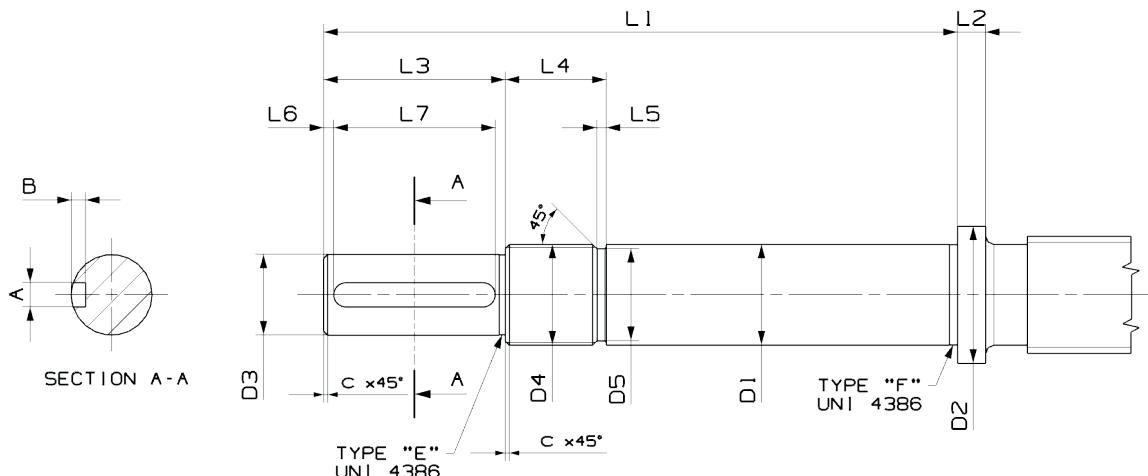

$D_0$	[mm]	Nominal Diameter	$J_s$	[kg·mm <sup>2</sup> /m]	Linear Momentum of Inertia of Shaft
$Ph_0$	[mm]	Lead	$J_{N-N}$	[kg·mm <sup>2</sup> ]	Momentum of Inertia of Nut with rotating Nut
$C_a$	[kN]	Dynamic Load Capacity	$J_{N-S}$	[kg·mm <sup>2</sup> ]	Momentum of Inertia of Rollers with rotating Shaft
$C_{oa}$	[kN]	Static Load Capacity	$f_s$	[10 <sup>6</sup> N]	Axial Stiffness Factor of Shaft
$m_s$	[kg]	Linear Mass of Shaft	$f_N$	[N <sup>2/3</sup> /μm]	Axial Stiffness Factor of Nut
$m_N$	[kg]	Nut overall Mass (including rollers)			

For approximate Axial Stiffness of Nut use the formula  $R_N = f_N \cdot F_{ax}^{1/3}$ , where  $F_{ax}$  is the external axial load applied  
 For approximate Axial Stiffness of Shaft use the formula  $R_S = f_s / L_S$ , where  $L_S$  is the length of the threaded shaft

<b><math>m_s</math></b>	<b><math>m_N</math></b>	<b><math>J_s</math></b>	<b><math>J_{N-N}</math></b>	<b><math>J_{N-S}</math></b>	<b><math>f_s</math></b>	<b><math>f_N</math></b>	<b>Designation</b>

ORDERING CODE

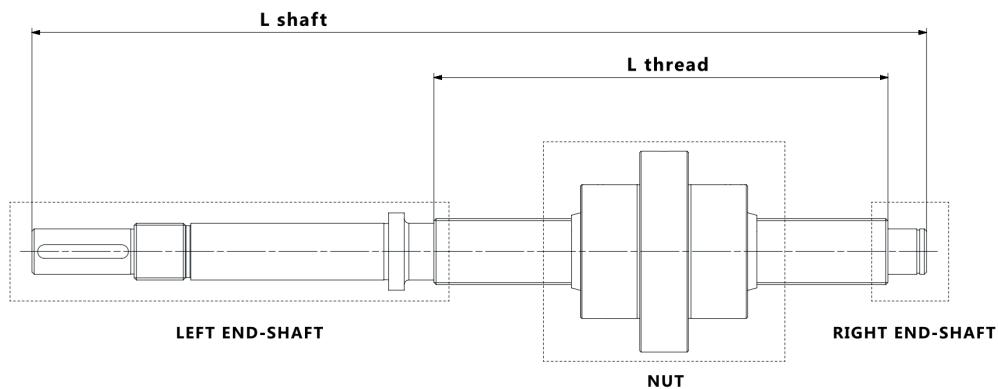

To order a Roller Screw choose the various options by filling in the box-card on this page. Use the Customization Tables displayed in next page as needed (Table A is required). Please provide any additional documentation (drawings or technical data) to our sales department.

	<b>NUT TYPE</b>
00C	Single cylindrical - standard backlash
00D	Single flanged - standard backlash
0RC	Single cylindrical - no backlash/reduced backlash
0RD	Single flanged - no backlash/reduced backlash
0CC	Split cylindrical - with preload
0DD	Split flanged - with preload
UPC	Ultra power -single cylindrical - standard backlash
UPD	Ultra power - single flanged - standard backlash
	<b>ROLLERSCREW NOMINAL DIAMETER [mm]</b>
	Default diameter selection: From 15 up to 100
	<b>ROLLERSCREW LEAD [mm]</b>
	Default lead selection: From 2 up to 42
	<b>ROLLERSCREW LEAD DIRECTION</b>
R	Right hand
L	Left hand
	<b>WIPERS</b>
A	Standard wipers
B	Wipers within nut
C	No wipers
	<b>ROLLERSCREW ACCURACY CLASS</b>
3	Precision class ISO3
5	Precision class ISO5
	<b>NUMBER OF ROLLERS</b>
MAX	Maximum number of rollers
MIN	Minimum number of rollers
000	Non machined end-shaft
001	Standard end-shaft for axial bearing - NO key-slot
011	Standard end-shaft for axial bearing - WITH key-slot
101 <sup>1)</sup>	Custom end-shaft for axial bearing - NO key-slot
111 <sup>1)</sup>	Custom end-shaft for axial bearing - WITH key-slot
002	Standard end-shaft for radial bearing
202 <sup>1)</sup>	Custom end-shaft for radial bearing
500 <sup>2)</sup>	Special end-shaft, drawing submission is required
	<b>LEFT SHAFT-END FORM</b>
X <sup>3)</sup>	Centering hole - UNI 6411
W <sup>3)</sup>	Threaded hole - UNI 9321
Z <sup>3)</sup>	Hexagon socket
	<b>RIGHT SHAFT-END FORM</b>
	Refer to "LEFT SHAFT-END FORM" Table
	<b>RIGHT SHAFT-END OPTIONAL FEATURES</b>
	Refer to "LEFT SHAFT-END OPTIONAL FEATURES" Table
	<b>SHAFT OVERALL LENGTH [mm]</b>
	Max Length 4000 mm. Contact Moog Technical Office for longer shafts
	<b>NUT ORIENTATION (Only in case of flanged nut)</b>
H	Nut "D1 g6" facing the shortest shaft-end
J	Nut "D1 g6" facing the longest shaft-end
	<b>LUBRICATION</b>
Y	Standard grease

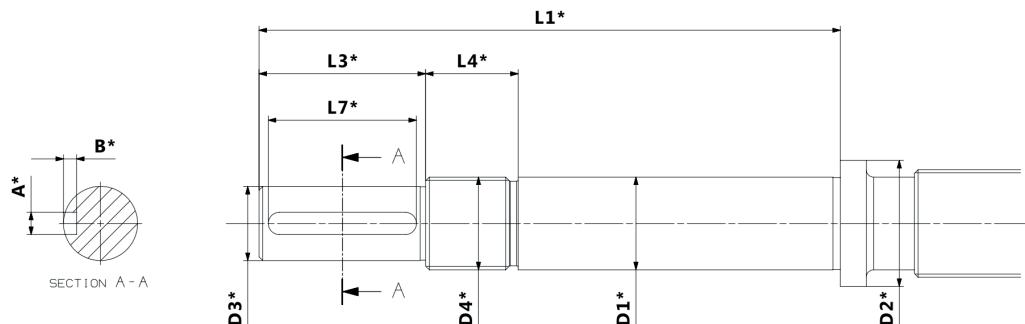

<sup>1)</sup> For an END-SHAFT with dimensions different from the standard, fill "Table B" and "Table C" and insert code 101, 111 or 202 into Box-card

2) For an END-SHAFT with dimensions different from the standard, into Table B and Table C and insert code **101, 111** or **202** into Box card

<sup>3)</sup> See "Table D" for more details.

**Table A - SHAFT DIMENSIONS**

Shaft overall length	<b>L shaft</b>	[mm]
Threaded section length	<b>L thread</b>	[mm]

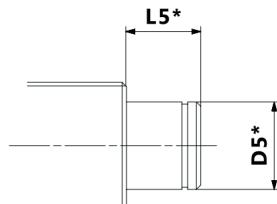

**Table B - CUSTOM SHAFT-END FOR AXIAL BEARING**

Use this table for custom END-SHAFT with "001" or "011" geometry but not standard dimensions.

Fill Box-card with code "101" for Custom end-shaft for axial bearing - NO key-slot

Fill Box-card with code "111" for Custom end-shaft for axial bearing - WITH key-slot

<b>L1*</b>	[mm]	<b>D3*</b>	[mm]
<b>L3*</b>	[mm]	<b>D4*</b>	[mm]
<b>L4*</b>	[mm]	<b>A*</b>	[mm]
<b>D1*</b>	[mm]	<b>B*</b>	[mm]
<b>D2*</b>	[mm]	<b>L7*</b>	[mm]

**Table C - CUSTOM SHAFT-END FOR RADIAL BEARING**

Use this table for custom END-SHAFT with "002" geometry but not standard dimensions.

Fill Box-card with code 202 for custom end-shaft for radial bearing

<b>D5*</b>	[mm]	<b>L5*</b>	[mm]
------------	------	------------	------

**Table D - SHAFT-END OPTIONAL FEATURES**

"X" Centering hole - UNI 6411	"W" Threaded hole - UNI 9321	"Z" Hexagon socket
